IRED		NO. OF ENCLS.
OF		SUPPLEMENT TO 25X REPORT NO.
DATED & STREET ONTENTS DY LAW	CONTAINS INFORMATION APPECING THE NATIONAL DEPENSE TATES WITHIN THE MEASURE OF THE REPRODUCT ACT SO B. AS AMERICADO. ITS TRANSMISSION OF THE REPUBLISHON THE ANALYSIS OF THE REPUBLISHON THE S. S. UNEV SERBODUCTOR OF THIS FORM IS PROBLEMED.	ALUATED INFORMATION 25
1.	The Scientific-Technical Bureau #3 of SAG Kabel (With Technisches Buero-Geraetebau Mr. 3) (WTB 3)1 is local	issenschaftlich-
,	Neue Bahnhofstrasse 9-17, on premises which formerly Knorr-Bremse works. The Chief of the bureau is M.A.	v belonged to the
2.	Neue Bahnhofstrasse 9-17, on premises which formerly	ment on the basis of a Moscow. The following section riod August 1952 to gle of inclination developed by a team
2.	Neue Bahnhofstrasse 9-17, on premises which formerly Knorr-Bremse works. The Chief of the bureau is M.A. This bureau designs pilot models of electronic equip written specifications believed to be forwarded from two items were under development in the Measuring-Te (Abteilung Messtechnik) of the Bureau during the per February 1953: a) Kreiselvertikale, a device for measuring the ang (Noigungswinkel) of an object. This device was of five men in the section over a period of sine	ment on the basis of a loscow. The following echnique Section riod August 1952 to gle of inclination developed by a team e months. It was agnetic field of the clus/minus 60,000 gammas is expected that a team is months in its development.
3.	Neue Bahnhofstrasse 9-17, on premises which formerly Knorr-Bremse works. The Chief of the bureau is M.A. This bureau designs pilot models of electronic equipartite specifications believed to be forwarded from two items were under development in the Reasuring-Te (Abteilung Messtechnik) of the Bureau during the per February 1953: a) Kreiselvertikale, a device for measuring the ang (Noigungswinkel) of an object. This device was of five men in the section over a period of sine forwarded to the USSE when completed. b) A magnetograph, to measure the strength of the mearth. This device is said to have a range of more work on the device was begun in early 1953. It of three men will be occupied for a period of 18	oment on the basis of a Noscow. The following echnique Section riod August 1952 to gle of inclination developed by a team e months. It was agnetic field of the plus/minus 60,000 gammas is expected that a team is months in its development.
3.	Neue Bahnhofstrasse 9-17, on premises which formerly Knorr-Bremse works. The Chief of the bureau is M.A. This bureau designs pilot models of electronic equipartites specifications believed to be forwarded from two items were under development in the Heasuring-Te (Abteilung Messtechnik) of the Bureau during the per February 1953: a) Kreiselvertikale, a device for measuring the ang (Noigungswinkel) of an object. This device was of five men in the section over a period of sine forwarded to the USSE when completed. b) A magnetograph, to measure the strength of the mearth. This device is said to have a range of more work on the device was begun in early 1953. It of three men will be occupied for a period of 18 The UBSE has ordered five of the finished device. An unidentified Soviet acceptance official came to the strength of the measure the strength of the measure the strength of the means the strength of the means are unidentified Soviet acceptance official came to the strength of the streng	oment on the basis of a loscow. The following sechnique Section riod August 1952 to gle of inclination developed by a team a months. It was agnetic field of the clus/minus 60,000 gamma. It is expected that a team a months in its development as to be delivered. The Bureau to accept
3.	Neue Bahnhofstrasse 9-17, on premises which formerly Knorr-Bremse works. The Chief of the bureau is M.A. This bureau designs pilot models of electronic equipartiten specifications believed to be forwarded from two items were under development in the Reasuring-Re (Abteilung Messtechnik) of the Bureau during the per February 1953: a) Kreiselvertikale, a device for measuring the ang (Noigungswinkel) of an object. This device was of five men in the section over a period of sine forwarded to the USS, when completed. b) A magnetograph, to measure the strength of the mearth. This device is said to have a range of work on the device was begun in early 1953. It of three men will be occupied for a period of 18 The UBSS has ordered five of the finished device. An unidentified Soviet acceptance official came to the delivery of the Kreiselvertikale. Comment: WTB-3 is also known as	ment on the basis of a Moscow. The following sechnique Section riod August 1952 to gle of inclination developed by a team e months. It was magnetic field of the clus/minus 60,000 gammas is expected that a team a months in its development as to be delivered. The Bureau to accept NTB-3, the abbreviation
3.	Neue Bahnhofstrasse 9-17, on premises which formerly Knorr-Bremse Works. The Chief of the bureau is M.A. This bureau designs pilot models of electronic equip written specifications believed to be forwarded from two items were under development in the Keasuring-Te (Abteilung Kesstechnik) of the Bureau during the per February 1953: a) Kreiselvertikale, a device for measuring the ang (Neigungswinkel) of an object. This device was of five men in the section over a period of sine forwarded to the USSI when completed. b) A magnetograph, to measure the strength of the mearth. This device was begun in early 1953. It of three men will be occupied for a period of 18 The USSI has ordered five of the finished device. An unidentified Soviet acceptance official came to the delivery of the Kreiselvertikale. 1. Comment: WTB-3 is also known as for the Russian name of the bureau. 2. Comment: The Kreiselvertikale is thoughted the Russian Air Force; the magnetograph is the Navy.	ment on the basis of a Moscow. The following sechnique Section riod August 1952 to gle of inclination developed by a team e months. It was magnetic field of the clus/minus 60,000 gammas is expected that a team a months in its development as to be delivered. The Bureau to accept NTB-3, the abbreviation
3.	Neue Bahnhofstrasse 9-17, on premises which formerly Knorr-Bremse works. The Chief of the bureau is M.A. This bureau designs pilot models of electronic equip written specifications believed to be forwarded from two items were under development in the Measuring-Te (Abteilung Messtechnik) of the Bureau during the per February 1953: a) Kreiselvertikale, a device for measuring the ang (Noigungswinkel) of an object. This device was of five men in the section over a period of cine forwarded to the USSE when completed. b) A magnetograph, to measure the strength of the mearth. This device is said to have a range of a work on the device was begun in early 1953. It of three men will be occupied for a period of 18 The UBSE has ordered five of the finished device. An unidentified Soviet acceptance official came to the delivery of the Kreiselvertikale. 1. Comment: WTB-3 is also known as for the Russian name of the bureau. Comment: The Kreiselvertikale is thoughted the Russian Air Force; the magnetograph is the	proposed to the Poryadin ment on the basis of a Noscow. The following section riod August 1952 to gle of inclination developed by a team e months. It was agnetic field of the plus/minus 60,000 gamma: is expected that a team is expected that a team is to be delivered. The Bureau to accept NTB-3. the abbreviation ought to be for the use or bught to be for the Sovership of the S
